Dual-Cure Resin Cement System

CLEARFIL™ ESTHETIC CEMENT EX

EXcellent Solution for Your Aesthetic Needs

- One bottle primer bonds any type of Ceramic Restoration with high bond strength (Porcelain, Zirconia, Alumina, Lucite and Lithium Disilicate).
- Virtually No Post-Operative Sensitivity with Dentin Sealing Properties.
- Good Color Stability, stain and high abrasion resistance due to highly filled/hydrophobic composite resin matrix.
CLEARFIL ESTHETIC CEMENT EX gives you more confidence when cementing, due to superior bond strength and durability on all substrates (ex: enamel, dentin, porcelain and metal oxides). Kuraray’s legendary adhesive technology in both PANAVIA and CLEARFIL SE BOND and original adhesive monomer MDP, is the key of high bond strength and long-term durability.

In addition, cementation technique has a significant effect on the fracture strength and leakage of all ceramic restorations. The Kuraray adhesive resin cement system was reported to increase all-ceramic restorations’ fracture strength and to improve marginal sealing significantly, as compared to RelyX* Unicem* and zinc phosphate. On the other hand, the fracture strength of RelyX* Unicem* was similar to that of zinc phosphate.1)

EXpect the Best Results to Tooth

CLEARFIL DC BOND, a one-step dual-cured self-etch bonding agent that exhibits high bond strength and durability to enamel and dentin.

Separation of hydrophillic and hydrophobic components is often perceived as the imperfection of one-step self-etch bonding agents; however, Kuraray’s Molecular Dispersion (MD) technology allows the bond liquid to remain homogeneous after evaporation of the solvent, thereby contributing to a strong durable hybrid bond layer.
**CLEARFIL CERAMIC PRIMER** is the only product which received “5-Stars” and was top-ranked in this category, according to 2009 Reality. CLEARFIL CERAMIC PRIMER works with crowns and bridges made of all ceramics, thanks to a Dual Monomer system. In addition, CLEARFIL CERAMIC PRIMER is chemically stable and works immediately on application.

---

### Dual Monomer System Works for all Metal-Free Surfaces
- Proved by independent data. (Fig. 3)
- Contains two adhesive monomers.
- MDP (Kuraray’s original phosphoric acid monomer) bonds to Zirconia and Alumina.
- γ-MPS (Silane coupling agent) bonds to Lucite, Lithium disilicate and Feldspathic Porcelain.

### Long Shelf-life, Works Immediately on Application
- CLEARFIL CERAMIC PRIMER is an outstanding product, since Kuraray R&D group succeeded in solving the challenges associated with one-bottle silane systems.
- Because CLEARFIL CERAMIC PRIMER does not contain “water,” the deactivation reaction of γ-MPS is limited. This makes CLEARFIL CERAMIC PRIMER chemically stable and effective even after being stored at 50°C (122°F) for 2 months.***
- In addition, MDP is a stronger acid than acetic acid; no waiting is required after applying.

2) Official information from the manufacturer (IFU, MSDS, brochure) as of January 2011.
3) Source: Kuraray Medical Inc.
4) Not applicable because it does not contain water. As a result this liquid is chemically stable, which ensures consistent high performance throughout the shelf-life.

**CLEARFIL CERAMIC PRIMER**

---

**Performance, simplicity and affordability are in one product — Key factors for future success of CAD/CAM era.**
Highlights of Cementation Procedure

Try-in
- Try-in, wash and dry

For Ceramic
- For Ceramic
- As necessary, sandblast, ultrasonic and dry.
- Etch, wash and dry. Apply primer and air-dry.

Cementation
- Seating and removal of excess cement.
- Etch, wash and dry. Apply primer and air-dry.
- Light-cure* the margins and leave for 3 mins.

For Tooth
- Try-in, wash and dry As necessary, sandblast, ultrasonic and dry.
- Mix liquids A and B.
- Apply and leave for 20 sec.
- Air-dry for 5 sec. and light-cure for 10 sec.
